SUMMARY

MERN Stack Software Engineer with hands-on experience in developing and deploying scalable web applications. Delivered a Parcel Delivery WebApp from scratch, contributing across SDLC, Agile sprints, and release planning. Skilled in DevOps practices using CI/CD pipelines, Docker, and cloud environments for automated deployments.

EDUCATION

B.Tech in Computer Engineering, GH Raisoni College of Engineering and Management 7.66 CGPA, 2021 – 2024

Diploma in Computer Engineering, Theem College of Engineering 89.89 % 2019 - 2021

SKILL

Languages: JavaScript (ES6+) , C++ , Python
MERN Stack: MongoDB, Express.js, React.js, Node.js
Frontend: React js, Next js, Redux, HTML, CSS, Tailwind CSS, Bootstrap, Material UI
Backend: REST APIs, JWT Auth, Middleware, MVC, FastAPI
Database: MongoDB, MySQL
Tools: Git, GitHub, Postman, CI/CD, Docker, AWS

EXPERIENCE

Jr. Software Engineer – RBRICKKS Technology, Pune (May 2025 – Present)

- Built a full-stack parcel delivery platform using MongoDB, Express.js, React.js, and Node.js for Users, Drivers, and Admin. Implemented **secure payment integration** and optimized APIs for fast processing and seamless user experience.
- Optimized APIs and backend workflows for faster response and improved application performance. Followed **Agile sprints and full SDLC processes**, including feature planning, development, and testing.

Software Intern - AB infotech Solutions (May 2024 - Mar 2025)

- Developed and optimized dynamic MERN stack web applications, boosting application speed by 70% and scalability, while delivering responsive, cross-browser compatible interfaces through close collaboration with the design team.
- Conducted rigorous testing and debugging to cut reported bugs by 40%, and leveraged Git to increase website accessibility compliance by 30% by adhering to modern web standards

Open Source Contribution | WordPress / Gutenberg

- Addressed a visual regression in the Boot package's Connectors page where a black gap appeared on scroll after the sidebar was hidden.
- Implemented a solution using CSS specificity and flexbox, collaborating with design team feedback to ensure flyout menus were not affected.
- Pull request (#76764) merged into Gutenberg and scheduled for WordPress 7.0.

PROJECTS

Transparent Charity Application Using Blockchain (July 2023 - Dec 2023)

- Built a platform using React, Node.js, Express, and Blockchain APIs called Crowd-Funding for NGOs to self-register and create campaigns
- Created a dashboard to display active campaigns clearly for NGOs and visitors
- Enabled easy campaign visibility on the website so interested donors can find and support them

Online Notes Sharing System using MERN Stack (Jun 2023 – Dec 2023)

- Developed a web-based platform for users to register and share notes securely using MERN Stack.
- Managed user and notes databases efficiently, allowing users to update their information and notes in real-time.
- Ensured smooth user experience by implementing effective control and tracking of user registrations and associated data.
